

AMENDMENT TO THE CLAIMS:

Please amend claims 2-12 as follows:

1. (Original) Loudspeaker arrangement in a device for playback of stereophonic audio signals with a housing (22) arranged in the device, a loudspeaker (10) for bass signals and loudspeakers (12, 13) for mid-range and treble signals, in which crossover networks (31, 32) separate the stereophonic audio signals (S_L , S_R) for playback with loudspeakers (10, 12, 13) into a bass signal and mid-range and treble signals, characterized by the fact that the crossover networks (31, 32) have a crossover frequency higher than the cut-off frequency of loudspeaker (10) for bass signals.

2. (Currently amended) Loudspeaker arrangement according to Claim 1, ~~characterized by the fact that that wherein the crossover frequency of crossover networks (31, 32)~~ is about 350 Hz.

3. (Currently amended) Loudspeaker arrangement according to Claim 1, ~~or 2, characterized by the fact that wherein the loudspeakers (12, 13) for the mid-range and treble signals and the loudspeaker (10) for the bass signals have their own closed partial housing (23, 24, 27).~~

4. (Currently amended) Loudspeaker arrangement according to Claim 3, ~~characterized by the fact that wherein the partial housing (23, 24, 27) of loudspeaker (12, 13) for the mid-range and treble signals and the loudspeaker (10) for bass signals are separated from each other by chambers (25, 26).~~

5. (Currently amended) Loudspeaker arrangement according to Claim 4, ~~characterized by the fact that wherein at least one of the chambers (25, 26) and/or the partial housings (23, 24, 27) are acoustically damped.~~

6. (Currently amended) Loudspeaker arrangement according to ~~claim 1, wherein one of the Claims 1 to 5, characterized by the fact that the partial housing (27) of the loudspeaker (10) for the bass signals has a volume of 0.5 - 1.5 L.~~

7. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 6, characterized by the fact that the partial housing (23, 24) of loudspeakers (12, 13) for the mid-range and treble signals have a volume of about 0.04 L each.

8. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 7, characterized by the fact that the loudspeakers (12, 13) for the mid-range and treble signals have a distance from each other of 150 - 500 mm.

9. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 8, characterized by the fact that the loudspeaker (10) for the bass signals is driven by an amplifier (35, 36) with a power of 5 - 16 watts W.

10. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 9, characterized by the fact that the loudspeakers (12, 13) for the mid-range and treble signals are driven by amplifiers (35, 36) with a power of 3 - 7 watts W. each.

11. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 10, characterized by the fact that the loudspeaker arrangement is a component of an entertainment electronics device.

12. (Currently amended) Loudspeaker arrangement according to claim 1, wherein one of the Claims 1 to 10, characterized by the fact that the loudspeaker arrangement is a component of a monitor or computer.
